1.1 Preparing feature dataset for learning

1.1.1 Splitting in x and y

[37]:
```
x = features_dataset[features_columns[:-1]]
y = features_dataset[activity_columns]

## split
x_train, x_valid, y_train, y_valid = train_test_split(x, y, test_size=0.2,␣
 ↪random_state=0, stratify=y)

## scaling
x_train = standard_scaler.fit_transform(x_train)
```

```
x_valid = standard_scaler.transform(x_valid)
```

2 Random tree forest

[38]:
```
ftc = RandomForestClassifier(n_estimators=53, random_state=0)
ftc.fit(x_train, y_train)
```

[38]:
```
RandomForestClassifier(n_estimators=53, random_state=0)
```

2.1 Validation result

[39]:
```
predictions = ftc.predict(x_valid)
```

Accuracy

[40]:
```
accuracy_score(y_valid, predictions, normalize=True)
```

[40]:
```
0.9858823529411764
```

Classification report

[41]:
```
print(classification_report(y_valid, predictions,␣
 ↪target_names=activity_columns, zero_division=0))
```

```
                   precision    recall  f1-score   support

 activity_cycling       1.00      1.00      1.00       282
 activity_walking       0.99      0.98      0.99       145
 activity_running       0.98      0.97      0.98       141
activity_standing       0.96      0.99      0.97       141
  activity_sitten       1.00      0.98      0.99       141

        micro avg       0.99      0.99      0.99       850
        macro avg       0.99      0.98      0.98       850
     weighted avg       0.99      0.99      0.99       850
      samples avg       0.99      0.99      0.99       850
```

2.1.1 Confusion matrix

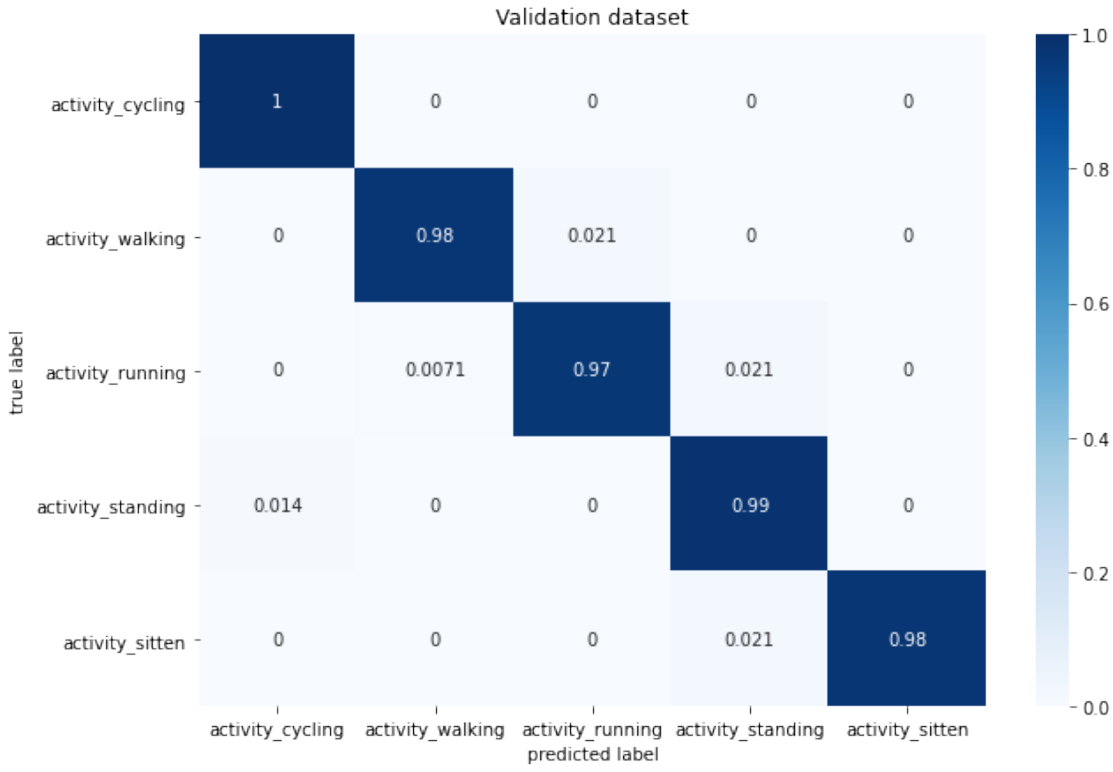
[42]:
```
import seaborn as sn

#confusion_matrix(valid_y, prediction_y)
cm = confusion_matrix(y_valid.values.argmax(axis=1), predictions.
 ↪argmax(axis=1), normalize='true')

df_cm = pd.DataFrame(cm, index=activity_columns, columns=activity_columns)
df_cm.head()
plt.figure(figsize = (10,7))
sn.heatmap(df_cm, annot=True, cmap='Blues')

plt.title("Validation dataset")
plt.xlabel("predicted label")
plt.ylabel("true label")
```

[42]:
```
Text(68.09375, 0.5, 'true label')
```



2.2 Test result

[43]:
```
test_dataset = extract_features_from_correspondents(test_users)

test_dataset[activity_columns] = 0

#features_dataset.loc[(features_dataset['activiteit'] == 'springen'),␣
↪'activity_jumping'] = 1
